TILING SYSTEM SOLUTIONS

TILING TO THE HIGHEST QUALITY
From decorative tiled surfaces to highly functional tiled wall and floor finishes, tiling is one of the most popular surface finishing techniques that are used to enhance the appearance and functionality of all types of buildings and facilities. It is always crucial to select the right tile and the right tile installation system for each different area of each specific project. This should include the correct surface preparation, waterproofing and joint sealing solutions for each area and tile in order to ensure the right quality and durability. Sika has developed a comprehensive range of tile adhesives, tile grouts and useful ancillary products that are designed for use as integrated systems to achieve the optimum results.
05 Tiling with large-format ceramic
07 Tiling with porcelain stoneware
09 Tiling drywalls in dry areas
11 Tiling drywalls in wet areas
13 Tiling for wet rooms
15 Tiling with marble, granite & other natural stone tiles
17 Tiling new balconies
19 Refurbishment of tiled balconies
21 Tiling on facades
23 Tiling in and around swimming pools
24 Tile adhesives
26 Tile adhesive selector
28 Tile grouts
29 Tile grout selector
30 Ancillary products
Larger ceramic and natural stone tiles create a seamless and contemporary look. But laying larger tiles successfully for the long-term, requires not only good skills but also advanced solutions that guarantee maximum reliability and performance.
Sika tile installation systems provide: a flat surface that is achieved with levelling technology designed to avoid separation and imperfections, together with an excellent finish. This is easily achieved by the use of a new generation, high performance, highly deformable, cementitious adhesive with a high polymer content, which is applied in double spreading.

Then a flexible tile grout with low modulus and excellent mechanical strengths and high abrasion resistance is used, together with a high performance elastic, polyurethane based sealant for all potentially moving joints and connections.

SikaCeram®-205 Large

Cementitious tile adhesive for fixing all types of ceramic tiles of a medium to larger size, with extended open time and high resistance to vertical slip.

**MAIN CHARACTERISTICS:**
- For both interior and exterior applications
- Can be applied at up to 10 mm thick
- Available in white and grey, supplied in 25 kg valve bags
- Classification: C2TE
Porcelain tiles are highly durable ceramic tiles, as they are produced under higher pressures and temperatures to be extremely hard and non-absorbent. Therefore they are frequently selected by demanding project owners who value performance and reliability, both in residential and public areas.
TILING WITH PORCELAIN STONEWARE

For these areas and exposure conditions it is necessary to use a tile installation system that is also able to meet these requirements and accommodate the high stresses. This means providing a suitable substrate with high compressive and tensile strengths. Sika installation systems achieve this with a new generation of polymer modified tile adhesives that are specifically designed for bonding non-absorbent materials. Then finishing is with a flexible tile grout that also has a good mechanical strengths and high abrasion resistance. A high performance polyurethane based elastic sealant is used for any movement, isolation or connection joints that must be brought through the system.

1 SURFACE PREPARATION
SikaScreed®-1
Premix product for screeds

2 TILE ADHESIVE
SikaCeram®-255 StarFlex LD
Deformable cementitious tile adhesive, with low dust technology

3 TILE GROUT
SikaCeram® StarGrout
Epoxy based grout for joints from 1 to 15 mm width

4 SEALANT
Sikaflex®-11 FC+
High-performance PU sealant

SikaCeram®-255 StarFlex LD
Deformable cementitious tile adhesive, with extended open time and low dust technology.

MAIN CHARACTERISTICS:
- For both interior and exterior applications
- Can be applied at up to 15 mm thick
- Available in white and grey, supplied in 25 kg valve bags
- Classification: C2TES1
Drywall construction techniques and materials are the most widely used system to form the walls and ceilings in medical, hospitality, educational and urban housing developments today. There is also an increasing tendency to use ‘dry’ floor boarding systems, which are also considered to be a quick and easy underlayment for tiles.
Sika provides a full system for the secure installation of tiles on these substrates used traditionally now in dry areas, not regularly exposed to moisture. Firstly a primer is applied to seal the surface and prevent any gypsum contact with cement; then flexible dispersion on vertical application and cementitious tile adhesives with a high polymer content on horizontal application; followed by a two-component waterproof epoxy tile grout with high mechanical and chemical resistance. Finally the system is completed with a high performance, antifungal, elastomeric movement and connection joint sealant.

**TILING DRYWALLS IN DRY AREAS**

SikaCeram®-355 StarPaste

Ready-to-use tile adhesive in paste form, with very low consumption in comparison to traditional pastes, designed for interior applications on walls.

**MAIN CHARACTERISTICS:**
- Can be used directly over old ceramic tiles or paint, at up to 5 mm thick
- Provides up to 50% more coverage than conventional pastes
- Dust free in two ways:
  - It is a dispersion paste – no powder and no dust
  - No removal of old tiles or paint is needed – no extra work and no dust
- Available in white, supplied in 8 kg and 15 kg pails
- Classification: D2 TE

**SURFACE PREPARATION**
Sika Primer®-11 W*
Synthetic resin based primer
* Not necessary with SikaCeram®-355 StarPaste

**TILE ADHESIVE (wall)**
SikaCeram®-355 StarPaste
Ready to use tile adhesive in paste

**TILE ADHESIVE (floor and/or wall)**
SikaCeram®-255 StarFlex LD
Deformable cementitious tile adhesive with low dust technology

**TILE GROUT**
SikaCeram® StarGrout
Epoxy based grout for joints from 1 to 15 mm width

**SEALANT**
Sikasil® C
Neutral-curing silicone sealant
Drywall materials and techniques are quick and easy to work with, which contributes to their growing popularity, even for use in wet areas. However, they are not moisture resistant and therefore require special treatment and protection against the penetration of water in both vapor and liquid form.
Sika provides a full system to fulfill these demanding requirements. Firstly a liquid, elastic waterproofing membrane is applied, with compatible sealing tape to waterproof and seal at any joints, around fittings, penetrations and at all perimeter terminations. Then a flexible dispersion or cementitious tile adhesive with a high polymer content is used for the tile installation. A special highly flexible epoxy tile grout with high mechanical strengths and abrasion resistance is applied in the selected color shade. Finally the system is completed with a high performance, antifungal, elastomeric, movement and connection joint sealant.

1. **LIQUID APPLIED MEMBRANE**
   Sikalastic®-200 W
   Liquid applied waterproofing membrane

2. **WATERPROOFING TAPE**
   Sika® SealTape
   Elastic sealing tape

3. **TILE ADHESIVE** (wall)
   SikaCeram®-355 StarPaste
   Ready-to-use tile adhesive in paste

4. **TILE ADHESIVE** (floor and/or wall)
   SikaCeram®-255 StarFlex LD
   Deformable cementitious tile adhesive with low dust technology

5. **TILE GROUT**
   SikaCeram® StarGrout
   Epoxy based grout for joints from 1 to 15 mm width

6. **SEALANT**
   Sikasil® C
   Neutral-curing silicone sealant

### SikaCeram® StarGrout

Two-component, colored epoxy tiling grout, for joints from 1 to 15 mm wide, with excellent workability, reduced odor and high mechanical and chemical resistance.

**MAIN CHARACTERISTICS:**
- Premium product suitable for grouting all types of ceramic tiles, mosaic and natural stone
- For both interior and exterior applications
- Due to its extremely high resistance it is the ideal grouting solution for projects where watertightness and hygiene play a deciding role, such as swimming pools or laboratories
- Available in 10 colors, supplied in 3 kg pails
- Classification: RG and R2T
Wet areas are usually high use areas that are frequently wet due to their function or washing and cleaning procedures e.g. shower facilities, bathrooms, laundries and kitchens. The most important thing for wet room projects is to ensure that the area is waterproof to prevent ingress and subsequent water damage, deterioration and microbiological growth within the building fabric.
TILING FOR WET ROOMS

Sika provides a complete integrated system to fulfill the very demanding requirements of these areas. Firstly the surfaces are made waterproof using a one-component cementitious mortar, which is highly flexible and fiber-reinforced. Then a flexible cementitious adhesive with a high polymer content is used for the tile installation, which is followed by a special highly deformable, waterproof, two-component, epoxy tile grout. This is designed to provide high chemical and abrasion resistance in the selected color shade. Finally, the system is completed with a high performance, antifungal, movement and connection joint sealant.

**Sikalastic®-1K**

One component, fiber-reinforced waterproofing mortar for flexible applications due to its excellent crack-bridging performance.

**MAIN CHARACTERISTICS:**
- Can be applied at different consistencies - only water needs to be added
- Available in 20 kg valve bags
- Classified according EN 14891, EN 1504-2
- Available in EN 14891 and EN 1504-2 standards
- EN 14891, EN 1504-2 and Italian Regulation D.M 174-2004 for drinking water contact

**SURFACE PREPARATION**

Sikafloor®-200 Level
Self levelling compound

**WATERPROOFING MORTAR**

Sikalastic®-1 K
One component cementitious mortar

**WATERPROOFING TAPE**

Sika® SealTape
Elastic sealing tape

**TILE ADHESIVE**

SikaCeram®-270 MultiFlow
Versatile fast-setting tile adhesive

**TILE GROUT**

SikaCeram® StarGrout
Epoxy based grout for joints from 1 to 15 mm width

**SEALANT**

Sikasil® C
Neutral-curing silicone sealant
Natural stone tiles are one of the most timeless and elegant finishing materials that never goes out of style. Sika provides a complete installation system for marble, granite and other natural stone tiles, which is not sensitive to moisture.
This Sika system includes subfloor screeds made with a hydraulic binder that ensures high compressive and tensile strengths, plus rapid hardening with very low shrinkage, thus allowing installation of the tiles after only 24 – 48 hours. For these natural stone materials, the Sika system uses a new generation of flexible, cementitious tile adhesive, with a high polymer content and low modulus that minimizes stress transfer. Finally, flexible, epoxy resin based grouts with high mechanical strengths and abrasion resistance are used, together with permanently elastic high performance non staining sealant for any moving joints and connections.

SikaCeram®-270 MultiFlow

Deformable, fast-setting tile adhesive that can be applied in four different consistencies, according to different application requirements.

MAIN CHARACTERISTICS:
- Technology designed for natural stone such as marble and other metamorphic stones that can be sensitive to discoloration; but also ideal for vitrified tiles
- Can be installed with variable mixing ratios (just by adding different amount of water), for example to use in a thin-, medium-, or thick-bed and flowable consistency
- Fast setting
- Provides up to 22% more coverage than traditional products
- Available in grey, supplied in 25 kg valve bags
- Classification: C2 FTE S1

1 SURFACE PREPARATION
SikaScreed®-1
Premix product for screeds

2 TILE ADHESIVE
SikaCeram®-270 MultiFlow
Versatile fast-setting tile adhesive

3 TILE GROUT
SikaCeram® StarGrout
Epoxy based grout for joints from 1 to 15 mm width

4 SEALANT
SikaHyflex®-355
Sika® Primer-3 N*
High performance non staining sealant
* For the sealant
The build-up and installation of tiled finishes on new balconies requires careful design and execution, in order to prevent commonly occurring problems such as uneven floors, inadequate drainage and/or incomplete waterproofing and detailing at the perimeters, etc.
## TILING NEW BALCONIES

The Sika installation system starts with the waterproofing layer, which uses a flexible, fiber-reinforced mortar that can be applied just 24 – 48 hours after the floor screed has been laid. Then the special cementitious tile adhesive is applied, which is specially designed for use on fully exposed balconies that are subject to extreme weather conditions. This is flexible, with a high polymer content to accommodate movement due to both wide and rapid temperature variations. The cement based tile grout is also flexible with a low modulus of elasticity, in order to minimize stress transfer to the substrate, whilst retaining good mechanical strengths and abrasion resistance. A high performance, elastic sealant is used to seal any moving joints or connections and ensure that they also remain watertight.

### SikaCeram® CleanGrout

Cement-based grout for tile joints from 1 to 8 mm, ideal for ceramic and natural stone tiles, as well as for glass mosaics. It is available in a wide color range.

**Main Characteristics:**
- For both interior and exterior applications
- For all types of tiles, mosaic, marble and natural stone
- High-quality, water-repellent tile grout that also inhibits the formation of mould and bacterial growth
- Available in 25 different colors, supplied in 2 kg and 5 kg bags
- Classification: CG2 WA
The penetration of water from exposed horizontal surfaces such as tiled terraces and balconies is a common cause of damage and deterioration in many buildings. The solutions provided by Sika enable the rapid refurbishment and upgrading of these areas.
REFURBISHMENT OF TILED BALCONIES

After removing any loose tiles and grout, then cleaning all of the sound surfaces, Sika repair mortars are used to fill any voids and restore the levels. The innovative 2-in-1 waterproofing layer and tile adhesive is applied in one single application, which is ideal for use on these areas exposed to the elements and all weather conditions. This solution therefore also saves you significant time and reduces the overall cost of the works. The system is completed with a flexible cementitious tile grout that has good mechanical and abrasion resistance. Finally, a high performance, elastic sealant is used to seal any moving joints or connections and ensure they also remain watertight.

1 SURFACE PREPARATION
SikaFloor®-200 Level
Self levelling compound

2 WATERPROOFING TAPE
Sika® SealTape
Elastic sealing tape

3 WATERPROOFING & TILE ADHESIVE
SikaCeram®-500 Ceralastic
Waterproofing and tile adhesive in only one product and layer

4 TILE GROUT
SikaCeram® CleanGrout
Cement based grout

5 SEALANT
SikaFlex®-11 FC+
Elastic adhesive sealant

SikaCeram®-500 Ceralastic
2-in-1 waterproofing layer and tile adhesive, applied in one single application.

MAIN CHARACTERISTICS:
- Applied in a single coat with a special spatula, it waterproofs and bonds tiles on horizontal surfaces
- Ideal for both interior and exterior applications on walls and floors, with considerable savings in time and cost:
  - 45% saving on your warehouse stocks
  - more space available
  - 30% saving on labor cost for installation
- Slashes application times from 9 to 2 days
- Available in grey, supplied 20 kg valve bags
- Classification: C2E S2 according to EN 12004, CM O2P according to EN 14891 and PI-MC-IR according to EN 1504-2
Installing tiles on building facades has long been considered as challenging and risky work. However, Sika has developed flexible tile adhesives and grouts that are capable of withstanding exposure to these demanding requirements, including accommodating the extreme weather conditions and the thermal movement of different facade materials.
Sika’s cementitious tile adhesive for external facade tiling has a high polymer content to ensure accommodation of the thermal movement due to the wide and rapid temperature variations. Sika’s special cement based tile grout for facades also has considerable flexibility, abrasion resistance and high mechanical strengths. Finally, the joints and perimeter terminations are sealed with a high performance, elastic polyurethane based sealant, which is designed for joints that must accommodate high movement and also maintain good aesthetic appearance.

**SURFACE PREPARATION**
Sika MonoTop® range
Complete range of mortars

**TILE ADHESIVE**
SikaCeram®-290 StarLight
Lightweight tile adhesive with sustainable raw material and 80% more coverage

**TILE GROUT**
SikaCeram® CleanGrout
Cement based grout for joints from 1 to 8 mm width

**SEALANT**
SikaHyflex®-250 Facade
Low-modulus joint sealant

---

**TILING ON FACADES**

SikaCeram®-290 StarLight
Lightweight cementitious tile adhesive with sustainable raw materials and low emissions.

**MAIN CHARACTERISTICS:**
- Tile adhesive that helps to ensure a sustainable future:
  - 20% of the cement is replaced by slag which comes from steel production. This reduces CO₂ by 30%, which is equal to a truck driving 30 km
  - 80% extra yield:
    - 20 kg of conventional tile adhesive covers 7.5 m² whilst 20 kg of SikaCeram®-290 StarLight covers 12.5 m²
  - Supplied in easy to transport 15 kg valve bags with carrying handles
  - Classification: C2 TE S1
The installation of tiles in and around swimming pools has always been a critical application and Sika has extensive expertise and experience of providing the ideal solution with a complete system.
TILING IN AND AROUND SWIMMING POOLS

Firstly the substrate is prepared, made good and levelled with an appropriate cementitious repair mortar / surface smoothing mortar. Then Sika’s polymer modified, fiber-reinforced, cementitious waterproofing mortar is applied in two layers, which ensures durable, long term waterproofing of the area. A special low modulus and highly flexible, cement based tile adhesive is then used, which is able to withstand thermal shock on the substrate, as well as continuous immersion in an alkaline environment. An epoxy resin based grout with high mechanical and chemical resistance is applied, and finally any moving joints and connections are sealed with a high quality, flexible and chemically resistant, neutral curing silicone joint sealant.

**SikaCeram®-230 Mosaic**

Ultra white, self-grouting, powder adhesive for glass mosaic with excellent workability and extended open time.

**MAIN CHARACTERISTICS:**
- Ideal for laying glass mosaic and all types of ceramic tiles. Particularly in applications such as swimming pools, wet rooms or other wet areas
- Suitable for both vertical and horizontal surfaces
- Can be applied at 4 mm thick layers
- Available in white, supplied in 25 kg valve bags
- Classification: C2 TE

**1 SURFACE PREPARATION**
Sika MonoTop® range
Complete range of mortars

**2 WATERPROOFING MORTAR**
Sikalastic®-1 K
One component cementitious mortar

**3 WATERPROOFING TAPE**
Sikadur-Combiflex® SG System
High performance joint sealing system

**4 TILE ADHESIVE**
SikaCeram®-230 Mosaic
Ultra white tile adhesive for laying glass mosaic

**5 TILE GROUT**
SikaCeram® StarGrout
Epoxy based grout for joints from 1 to 15 mm width

**6 SEALANT**
Sikasil® Pool
Neutral-curing silicone sealant

## MAIN ADVANTAGES

- Very good workability
- Frost proof
- No vertical slip
- Extended open time
- Applicable up to 10 mm thickness
- Extended open time
- No vertical slip
- Frost proof
- Ultra-white
- Self-grouting
- Excellent workability
- Frost proof
- Extended open time
- Fast-setting
- No vertical slip
- Frost proof
- Applicable up to 10 mm thicknesses

## USES

### SikaCeram®-100 Basic

- Suitable for: All types of ceramic tiles
- Can be used: Interior and exterior
- Perfect for: Kitchens, bathrooms, balconies, etc.

### SikaCeram®-205 Medium

- Suitable for: All types of ceramic tiles
- Can be used: Interior on floors and walls
- Perfect for: Kitchens, bathrooms, balconies, etc.

### SikaCeram®-205 Large

- Suitable for: All types of ceramic tiles
- Can be used: Interior on floors and walls
- Over underfloor heating (hot water systems)
- On old tiles (interior)
- Perfect for: Swimming pools, facades, etc.

### SikaCeram®-230 Mosaic

- Suitable for: Glass mosaic
- Can be used: Interior and exterior
- Over underfloor heating (hot water systems)
- On old tiles (interior)
- Perfect for: Swimming pools, industrial and heavily trafficked floors, facades, etc.

### SikaCeram®-240 Rapid

- Suitable for: All types of ceramic tiles
- Can be used: Interior and exterior
- Over underfloor heating (hot water systems)
- On old tiles (interior)
- Perfect for: Swimming pools, industrial and heavily trafficked floors, exposed facades, etc.

## PACKAGING

- 25 kg bag

---

24
TILING
SYSTEM SOLUTIONS
**SikaCeram®-255**
*StarFlex LD*

- Low dust emissions, highly deformable adhesive; C2TE S1 classified according to EN 12004.

**SikaCeram®-270**
*MultiFlow*

- Versatile fast-setting tile adhesive with lightweight fillers and different application consistencies; C2 FTE S1 class in thin bed consistency and C2 FE S1 class in flow-bed consistency.

**SikaCeram®-290**
*StarLight*

- Lightweight tile adhesive with sustainable raw materials; C2TE S1 classified according to EN 12004.

**SikaCeram®-355**
*StarPaste*

- Ready-to-use tile adhesive in paste, for ceramic tiles interior, specially designed for bathrooms and kitchens, perfect for drywalls; D2 TE classified according to EN 12004.

**SikaCeram®-500**
*Ceralastic*

- Flexible one-component waterproofing layer and tile adhesive in a single product application; C2E S2 classified according to EN 12004, CM O2P according to EN 14891 and PI-MC-IR according to EN 1504-2.

### Properties

- Low dust emissions
- Deformable
- No vertical slip
- Extended open time
- Frost proof
- Applicable up to 15 mm thicknesses

### Applications

- Suitable for: All types of ceramic tiles
- Thin, dense porcelain slabs
- Marble and other porous natural stone

- Can be used: Interior and exterior
- On floors and walls
- Over underfloor heating
- On old tiles (interior)

- Perfect for: Swimming pools, industrial and heavily trafficked floors, exposed facades etc.

- 25 kg bag

---

- 4 different application consistencies from thin-bed to flow-bed
- Deformable
- Fast setting
- No vertical slip
- Very low emissions

### Applications

- Suitable for: All types of ceramic tiles
- Thin, dense porcelain slabs
- Marble and other porous natural stone

- Can be used: Interior and exterior
- On floors and walls

- Perfect for: Swimming pools, industrial and heavily trafficked floors, over old tiling for indoor applications, etc.

- 25 kg bag

---

- Up to 80% more coverage
- Low dust technology
- Lightweight, easy to transport on site
- Sustainable raw materials

### Applications

- Suitable for: All types of ceramic tiles
- Glass mosaic
- Marble and other porous natural stone tiles

- Can be used: On indoor walls
- On plasterboard
- On wood
- On old tiles and painted surfaces

- Perfect for: Heavy load areas, swimming pools, facades, etc.

- 15 kg bag

---

- Ready to use
- Dust-free
- No vertical slip
- Extended open time

### Applications

- Suitable for: All types and sizes of tiles

- Can be used: Interior and exterior
- On floors and walls

- Perfect for: Wet rooms, balconies, terraces, swimming pools*, etc.

- *= applied in two layer

- 8 and 15 kg pail

---

- Single step waterproofing layer and tile adhesive in one product for horizontal applications
- No primer needed
- Huge time savings over traditional products and methods

- 20 kg bags

### MAIN ADVANTAGES

- Extremely hard finish
- Very good workability
- Water-repellent
- UV-resistant
- High resistance to abrasion
- Mould resistant
- Water-repellent
- Frost proof
- Stable colors
- High resistance to abrasion
- Very good workability
- Easy to clean
- Frost proof
- High mechanical and chemical resistance
- Excellent workability
- Reduced odour
- Easy to clean
- Long-lasting finish

### USES

**Suitable for:**
- All types of ceramic tiles
- Glass mosaic
- Marble

**Perfect for:**
- Interior and exterior
- Over underfloor heating (hot water systems)
- Swimming pools, etc.

**Suitable for:**
- All types of ceramic tiles
- Glass mosaic
- Marble and other porous natural stone

**Perfect for:**
- Interior and exterior
- Tanks
- Swimming pools, etc.

**Suitable for:**
- All types of ceramic tiles
- Glass mosaic
- Marble and other porous natural stone

**Perfect for:**
- Interior and exterior
- Over underfloor heating (hot water systems)
- Swimming pools, etc.

**Suitable for:**
- All types of ceramic tiles
- Ceramic, glass, marble and wood mosaic
- Marble and other porous natural stone

**Perfect for:**
- Interior and exterior
- Laboratories
- Dairies
- Spas and swimming pools, etc.

### PACKAGING

- 5 kg bag
- 5 kg and 2 kg bag
- 25 kg bag
- 3 kg plastic bucket Component A and B

### COLORS

- 5
- 25
- 3
- 10
- Can be embellished with glitters

### SEALANTS

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>CHARACTERISTICS &amp; ADVANTAGES</th>
</tr>
</thead>
</table>
| Sikaflex®-11 FC*  | ■ Cost-effective solutions  
|                   | ■ Certified performance and proven durability  
|                   | ■ Improved fresh adhesion                                                                                                                                 |
| Sikasil® C        | ■ Ideal where providing additional sand is a problem  
|                   | ■ No shrinkage  
|                   | ■ Very good finishing  
|                   | ■ Rapid-hardening                                                                                                                                 |
| Sikaflex®-355     | ■ Non staining  
|                   | ■ Movement capability of ±35% (ASTM C719)  
|                   | ■ Solvent free  
|                   | ■ Very good weathering resistance                                                                                                                                 |
| Sikaflex®-250 Facade | ■ Very good weathering and ageing resistance  
|                   | ■ Movement capability of +100/-50% (ASTM C 719)  
|                   | ■ Imparts low stress to the substrate  
|                   | ■ Very good adhesion to many building substrates                                                                                                                                 |
| Sikasil® Pool     | ■ Very high water resistance  
|                   | ■ High chlorine resistance (as required in swimming pools for disinfectant solutions)  
|                   | ■ Extremely high resistance to fungal attack  
|                   | ■ Excellent UV- and weathering-resistance                                                                                                                                 |

### BONDING AGENTS

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>CHARACTERISTICS &amp; ADVANTAGES</th>

### SikaCeram® T-Latex

Special latex emulsion for cementitious tile adhesive to improve adhesion and elasticity performances.

- Cost-effective solutions
- Certified performance and proven durability
- Improved fresh adhesion

### SikaCeram® LatexGrout

Special latex emulsion to be mixed with cementitious tile grouts to improve adhesion and flexibility.

- Increases the bond to the tile
- Enhances the surface hardness
- Improves flexibility
- Rises the mechanical strength
FOR MORE INFORMATION ABOUT SIKA TILING SYSTEM SOLUTIONS:

WE ARE SIKA
Sika is a specialty chemicals company with a leading position in the development and production of systems and products for bonding, sealing, damping, reinforcing and protecting in the building sector and the motor vehicle industry. Sika’s product lines feature concrete admixtures, mortars, sealants and adhesives, structural strengthening systems, industrial flooring as well as roofing and waterproofing systems.

Our most current General Sales Conditions shall apply. Please consult the most current local Product Data Sheet prior to any use.
