# PRODUCT DATA SHEET SikaSwell® A

# Hydrophilic swellable joint sealing profiles

### DESCRIPTION

SikaSwell<sup>®</sup> A is a rectangular acrylic sealing profile. It swells in contact with water to seal all types of construction joints and penetrations in concrete structures.

### USES

Joint sealing:

- Construction joints
- Pipe and steel work penetrations through walls and floor slabs
- Around all types of penetrations and connection joints
- Construction joints in cable ducts

# **FEATURES**

- Highly economical joint sealing solution
- Unique properties fill small cracks and voids
- Versatile solution for joints and details

### Permanently water resistant (wet & dry cycles)

- Resistant to various chemical substances
- Easy and fast to apply
- Can be applied on different substrates
- BBA system approvals with SikaSwell S-2
- Available in different sizes

### SUSTAINABILITY

 Conforms with LEED v4 MR credit: Building product disclosure and optimization — Material ingredients (option 2)

## **CERTIFICATES AND TEST REPORTS**

- Resistance to water pressure and durability SikaSwell<sup>®</sup> A2010, SikaSwell<sup>®</sup> S-2, BBA, Certificate No.13/4994
- Functional watertightness test, SikaSwell® A, WISS-BAU, Test report No. 2012-206

# **PRODUCT INFORMATION**

| Composition | Acrylic polymer                                                                                                                            |  |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------|--|
| Packaging   | Single rolls packed in vacuum foil. Multiple single rolls packed in cardboard boxes. Refer to current price list for packaging variations. |  |

| Shelf life           | 36 months from                                         | 36 months from the date of production                                                                                                                                                                                                                                                              |                            |                 |  |

# **BASIS OF PRODUCT DATA**

All technical data stated in this Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

### IMPORTANT CONSIDERATIONS

- Do not use SikaSwell<sup>®</sup> profiles for movement joints.
- SikaSwell<sup>®</sup> profiles expand when in contact with water. This is not instantaneous and will take a few hours.
- The Product is recommended for sealing against water pressures up to 2 bar. For pressures higher than 2 bar use an alternative or supplementary Sika Joint Sealing solution or contact Sika Technical Services for further information.

# ECOLOGY, HEALTH AND SAFETY

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Safety Data Sheet (SDS) containing physical, ecological, toxicological and other safety-related data.

# **APPLICATION INSTRUCTIONS**

### SUBSTRATE QUALITY

The substrate must be sound, clean, dry or matt damp, free from all surface contaminants that could impair the adhesion.

### SUBSTRATE PREPARATION

### EXISTING CONCRETE

Rough surfaces are susceptible to leaking. If the surface roughness cannot be leveled with SikaSwell<sup>®</sup> S-2 the roughness need to be removed by an appropriate Sika leveling mortar or mechanical treatment before the SikaSwell<sup>®</sup> S-2 and SikaSwell profile is applied.

#### FRESHLY CAST CONCRETE

Freshly cast concrete can be smoothed with a batten where SikaSwell  $\ensuremath{^{\ensuremath{\$}}}$  S-2 is to be placed.

#### APPLICATION

### IMPORTANT

#### Concrete cover

Insufficient concrete cover, low density concrete or voids will prevent the SikaSwell<sup>®</sup> profile from developing its waterproofing function.

- 1. Place the SikaSwell<sup>®</sup> profile in the centre of the concrete structure.
- 2. In reinforced concrete maintain a minimum cover of 8 cm on both sides.
- 3. In unreinforced concrete maintain a minimum cover of 15 cm on both sides.

SEALANT WITH A SIKASWELL® PROFILE

- Apply SikaSwell<sup>®</sup> S-2 adhesive in a narrow bed (size of triangular section ~12 mm tall and ~12 mm wide ) onto the prepared substrate. Extrude enough material to level the roughness of the substrate.
- Press the SikaSwell<sup>®</sup> profile firmly into the fresh applied SikaSwell<sup>®</sup> S-2. Place the SikaSwell<sup>®</sup> profile within a maximum of 30 minutes (+23 °C / 50 % r.h.).
- 3. Ensure full and continuous contact between the SikaSwell<sup>®</sup> S-2 and both the SikaSwell<sup>®</sup> profile and the substrate is achieved.
- Allow SikaSwell<sup>®</sup> S-2 to harden minimum 12 hours before placing concrete. For pouring height > 50 cm, SikaSwell<sup>®</sup> S-2 must harden for at least 24 hours before placing concrete.
- 5. Protect the SikaSwell<sup>®</sup> S-2 and the SikaSwell<sup>®</sup> profile against water (for example, rain) until the concrete is placed.
- 6. During placement compact the fresh concrete well around the SikaSwell<sup>®</sup> profile to achieve dense concrete without any honeycombing or voids.

### **CLEANING OF EQUIPMENT**

Clean all tools and application equipment immediately after use with Sika<sup>®</sup> Colma Cleaner. Hardened material can only be removed mechanically.
